
EMERGENT STRATEGY

Shaping Change, Changing Worlds

by adrienne maree brown
DEDICATION

I dedicate this book to the memory of C.J. Carrozza, whose spirit of discovery and passion
for learning and living helped me to keep learning and growing and having conversations. She said,
"Transform yourself to transform the world."

I dedicate this book also to the memory of Charity Hicks, who saw all the impossible good patterns in life
every day. She said, "Wage peace."

EPIGRAPH

"This may only be a dream of mine, but I think it can be made real."
--- Ellis Stier
FIRST AND FOREMOST, THANK YOU FOR OPENING THIS BOOK. I HOPE YOU ENJOY READING IT AS MUCH AS I HAVE ENJOYED LIVING, LEARNING, AND GATHERING IT.

WHEREVER YOU ARE BEGINNING THIS, TAKE A DEEP BREATH AND NOTICE HOW YOU FEEL IN YOUR BODY, AND HOW THE WORLD AROUND YOU FEELS.

TAKE A BREATH FOR THE DAY YOU HAVE LIVED SO FAR. AND A BREATH FOR THIS PRECIOUS MOMENT, WHICH CANNOT BE RECREATED.

NOW, ANOTHER FOR THE DAY AND NIGHT COMING.

HERE YOU ARE, IN THE CYCLE BETWEEN THE PAST AND THE FUTURE, CHOOSING TO SPEND YOUR MIRACULOUS TIME IN THE EXPLORATION OF HOW HUMANS, ESPECIALLY THOSE SEEKING TO GROW LIBERATION AND JUSTICE, CAN LEARN FROM THE WORLD AROUND US HOW TO BEST COLLABORATE, HOW TO SHAPE CHANGE.

AS I AM GATHERING AND WRITING THIS BOOK, THERE IS A TRAIL OF ANTS MOVING ALONG THE CEILING OF MY ROOM, AND THE SOUNDS OF A SMALL JUNGLE TOWN COMING IN AND OUT OF THE SCREENED OPEN WINDOWS, BIRDS SINGING, LAUGHTER, CHILDREN'S DELIGHT EMERGING FROM THAT, THEN TEARS. A CAR BACKFIRE, AND I SMELL SMOKE FROM THE DUST.

I FEEL GOOD. I'VE BEEN MEDITATING, PICKING UP MY YOGA PRACTICE, BIKING THE TWO MILES TO THE BEACH WHEN THE SUN COMES OUT. SOMETHING IS INJURED IN MY KNEE, BUT I AM FEELING ALIVE AGAINST MY LIMITS.

I CAME TO THIS EDGE OF MEXICO TO PULL A BOOK TOGETHER BECAUSE A FEW YEARS AGO IT WAS HERE, NEAR THIS TINY PORTION OF THE MASSIVE OCEAN, THAT I BEGAN TO REALIZE HOW IMPORTANT A STRATEGY, STRATEGIES FOR BUILDING COMPLEX PATTERNS AND SYSTEMS OF CHANGE THROUGH RELATIVELY SMALL INTERACTIONS, IS TO ME THE POTENTIAL SCALE OF TRANSFORMATION THAT COULD COME FROM MOVEMENTS INTENTIONALLY PRACTICING THIS ADAPTIVE, RELATIONAL WAY OF BEING, ON OUR OWN AND WITH OTHERS.

THE WAVES DRIFTING ME TOWARDS AND THEN AWAY FROM THE SHORE, SEABIRDS OF ALL KINDS FLOCKING OVER THE SALTY BLUE, PETRAS DROP DOWN AND SCOOPING SCHOOLS OF TINY FISH INTO THEIR BIG MOUTHS. DIVING UNDER THE MOVING SURFACE TO SEE HOW EVERYTHING HUMANS LEAVE IN THE WATER IS REAPPARENT IN AN ECOYSTEM. LIVING IN A HAMMOCK AND WATCHING MOSQUITO MAMAS APPROACH ME, WAIT FOR MY ATTENTION TO WANDER SO THEY CAN FEED ON MY BLOOD.

I LOVE THE SCENE AT THE END OF THE MATRIX WHERE Neo sees everything in green-on-black code. EMERGENT STRATEGIES ARE A WAY TO SEE THAT ALL OF US CAN BEGIN TO SEE THE WORLD IN LIFE-CODE—AWAKENING US TO THE SACRED SYSTEMS OF LIFE ALL AROUND US. MANY OF US HAVE BEEN AND ARE BECOMING STUDENTS OF THESE SYSTEMS OF LIFE, WONDERING IF IN FACT WE CAN UNLOCK SOME CRUCIAL UNDERSTANDING ABOUT OUR OWN HUMANITY IF WE PAY CLOSER ATTENTION TO THIS PLACE WE ARE FROM, THE BODIES WE ARE IN.

THE WORLD IS FULL OF BEAUTY, MAGIC, MIRACLE, AND PATTERNS THAT INDUCE WONDER. THIS BOOK IS A COLLECTION OF STORIES, SPEECHES, SPELTS, INTERVIEWS, CONVERSATIONS, TELLS, PROFILES, AND POEMS, SHARING MY LEARNING PROCESSES IN THE FACE OF THAT WONDER. YOU ARE BASICALLY HOLDING A BOOK OF ME SAYING: "WOW, EVERYTHING'S SO AMAZING!" OR: "THAT'S NOT WOR... WHY NOT GO WITH THE WOR OPTION?"

EMERGENT IS ONE OF THE BEST CONCEPTS I HAVE LEARNED FOR DISCUSSING THIS WAY, THIS WONDER. "EMERGENT IS THE WAY COMPLEX SYSTEMS AND PATTERNS ARISE OUT OF A MULTIPLICITY OF RELATIVELY SIMPLE INTERACTIONS." IT IS ANOTHER WAY OF SPEAKING ABOUT THE CONNECTIVE TISSUE OF ALL THAT EXISTS—THE WAY, THE Tao, THE FORCExE, CHANGE, GOD/DESS, LIFE, BIRDS FLOCKING, CELLS SPILLING, Fungi WHISPERING, UNDERGROUND.

EMERGENT EMPHASIZES CRITICAL CONNECTIONS OVER CRITICAL MASS, BUILDING AUTHENTIC RELATIONSHIPS, LISTENING WITH ALL THE SENSES OF THE BODY AND THE MIND.

WITH OUR HUMAN GIFT OF REASONING, WE HAVE TRIED TO CONTROL OR OVERCOME THE EMERGENT PROCESSES THAT ARE OUR OWN NATURE. THE PROCESSES OF THE PLANET WE LIVE ON, AND THE UNIVERSE WE CALL HOME. THE RESULT IS CRISIS AT EACH SCALE WE ARE AWARE OF, FROM OUR DEEPEST INNER MENTAL SENSITIVITIES TO THE COLLECTIVE SCALE OF CLIMATE AND PLANETARY HEALTH AND BEYOND, TO OUR SPECIES IN RELATION TO SPACE AND TIME.

THE CRISIS IS EVERYWHERE, MASSIVE, MASSIVE MASSIVE.

AND WE ARE SMALL.

BUT EMERGENCE NOTICES THE WAY SMALL ACTIONS AND CONNECTIONS CREATE COMPLEX SYSTEMS, PATTERNS THAT BECOME ECOSYSTEMS AND SOCIETIES. EMERGENCE IS OUR INHERITANCE AS PART OF THIS UNIVERSE: IT IS HOW WE CHANGE. EMERGENT STRATEGIES ARE HOW WE INTENTIONALLY CHANGE IN WAYS THAT GROW OUR CAPACITY TO EMBODY THE JUST AND LIBERATED WORLDS WE LONG FOR.
A few words on how this book is and is not.

I am offering this content as a cluster of thoughts to develop, observation of existing patterns, and questions of how we apply the brilliance of the world around us to our efforts to coexist in with this world as humans, particularly for those of us seeking to transform the crises of our time, to turn our legacy towards humanity.

This book is for people who want to radically change the world. To apply natural order and our love of life to the ways we create the next world. To tap into the most ancient systems and patterns with wisdom as we build tomorrow.

This book is not one that will teach you all about hard science, as I am not a scientist. As Octavia Butler said, “I would never have been a good scientist—my attention span was too short for that.”

My style is more “Ooh ah wow how??” than “Empirical data proves that...” I am writing this book primarily for other people like myself, who crinkle our brows and ran away when someone starts speaking math, who fell asleep almost immediately when attempting to read nonfiction, but who get spun into wonder about the natural world and want to know things, who feel and know more than we can say or explain, and want to know how knowing those things can transform the ways we approach changing the world.

I’m sure there are science people who could write a convention book to anything in here. The natural world actually supports any worldview—competitive, powerless, isolationist, violent.

For instance, humans so far have generally drifted and aligned with the “king” of the jungle or forest—tigers, bears. And yet so many of these creatures, for all their intimidating ferocity and alpha power, are going extinct. While a major cause of that extinction is human impact, there is something to be said for adaptation, the adaptation of small, collaborative species. Rodents and ants and flies and fungi and barks and wrinkles and barks and acalyptus and squirrels and vultures and mice and mosquitoes and dangers and to many more other collaborative life forms continue to proliferate, survive, grow, sustain.

I want to understand how we humans do that—how we earn a place on this precious planet, get into the “right relationship” with it. So I am focusing on the ways creatures and ecosystems function together and with the natural world.

I am open to critique, of course, if they are offered in the spirit of collective liberation. Staring focused on our foundational miraculous nature is actually very hard work in our modern culture of distraction. We are socialized to see what is wrong, missing, off, to tear down the ideas of others and uplift our own. To a certain degree, our entire future may depend on learning to listen, listen without assumptions or defenses. So I am open to hearing what doesn’t work about this book, as long as you promise to stay open to what does work.

We all learn differently, and this book favors those who learn like me, through inspiration, through late-night conversations, personal revelations, experience, and reflection. I hope it will inspire and engage your interest in complex sciences, and in being a miraculous world.

“Exercise your human mind as fully as possible, knowing it is only an exercise. Build beautiful artifacts, solve problems, explore the secrets of the physical universe, save the input from all the senses, feel the joy and sorrow, the laughter, the empathy, compassion, and tolerate the emotional memory in your travel bag.”

—Ryan Power, Waking Life

This is not a book to replace all the strategic processes to play in social justice movements, or to discount the work that has happened up until now—there have been effective movements towards justice and liberation throughout the history of human existence—I am thrilled by how humans have continuously stood up against our own weaknesses. I think throughout history we have done our best given what we know, and we will continue to do so. I also know that there are so many brilliant strategists out there who turn data into action and policy, and I respect that work. I see this offering as a noticing that can shape our next steps, as more water joining the river. And as a way to get aware of what we have learned so far, so that we can move forward from there, instead of repeating lessons we have already learned.

While my default position is wonder, I am not without critique, disappointment, frustration, and even depression when I contemplate humanity. Especially our social justice movements, where my expectations are (falsely) higher. I promise to be honest about the ways that those aspects of personal movement often show up in my longing and searching for other ways of being.

Octavia Butler, one of the cornerstones of my awareness of emergent strategy, spoke of the literal human flaw as a combination of hierarchy and intelligence. We are brilliant at survival, but brutal at it. We tend to slip out of consciousness the way we slip out of the woods, bloody and nasty and surprised to be alone. And clever—able to learn with our whole bodies the ways of this world.

My hope is that this content will deepen and soften that intelligence such that we can align our behavior, our structures and our movements with our visions of justice and liberation, and give those of us co-creating the future more options for working with each other and
embodying the things we fight for—dignity, collective power, love, generative conflict, and community.

I will be satisfied if this book sparks conversations, new practices, and projects where people keep noting, observing, and learning about emergence and liberation. If people see their experiential work affirmed by this content. And if I hear of people's solitary and collective transformation journeys related to emergent strategy, whether people use that exact terminology or not. I hope it is part of our (co)evolutionary journey.

I hope that this book is clear enough that people feel free to play with all of these observations and their own, add to it, discard what doesn’t serve, and keep innovating. I don’t want to be the owner of this, just a joyful conduit.

Throughout this book, I weave together thoughts and theories I have learned in the past decade of study and observation with original content, tools, spells, poems, examples, lists, assessments—everything I think of that could be helpful for those interested in this work.

As I was finishing the book it felt like it was missing something. I realized that it was because the way I have learned about emergent strategy is in conversation with others, so I asked a bunch of people I consider to be teachers in my life to get in conversation with me. And as their words poured in, in poems and stories and stories and testimonials, all of a sudden the book became really alive and exciting to me. It also grew to nearly five-hundred pages. I slowed down and started weaving and listening. Now you get to hear from a variety of people who are doing emergent strategy work—in their own words, in hybrid interviews, conversations, in love stories and moments of awe. Some of this content is in these pages, and some of it is on the Emergent Strategy Learning Institute site.*

The book can be engaged nonlinearly! There is an assistant section, you can start there and let that determine where you dive in. You can just go straight to the tools at the end and start facilitating and experimenting with them. Or you can start with a review of the principles and elements of emergent strategy, which are in conversation with each other and can stand alone or cluster.

You can read the book with others, assess each other and assess the groups and circles you move in. Come up with new words and new observations for all of this, notice how it connects and echoes other theoretical frameworks. Underline everything that moves you and then give it to someone younger than you. Come up with workshops and retreats around this work. Take it, run, go, grow, innovate, emerge.

You can also just like the idea of this book. I often like an idea that I don’t have time or attention to fully engage. I won’t be mad. I believe we are all actually already aware of these things, we just have the volume turned down. May this serve as a turn up of our awareness of our place in the universe.

There are a million paths into the future, and many of them can be transformative for the whole.

The Beginning of My Obsession

We have lived through a good half century of individualistic linear organizing (led by charismatic individuals or budget-building institutions), which intends to reform or revolutionize society, but falls back into modeling the oppressive tendencies against which we claim to be pushing. Some of those tendencies are seeking to assert one right way or one right strategy. Many align with the capitalistic belief that content growth and critical mass is the only way to create change, even if they don’t use that language.

There are new strategies emerging, or being remembered—many would describe this as a shift from a masculine to feminine (or patriarchal to feminine) leadership. I see that, and I think it is also about something beyond all of our binaries—evolving in relationship with our hierarchical tendency.

At this point in my life, I am not against hierarchy. I notice hierarchies in my life and attention all the time, inside my own preferences for whom I speak. I spend my waking hours with and how I like to spend my time. I also deeply value experience and natural affinity for things—I am oriented towards healing and not math, so I don’t offer myself up to create budgets for people. I follow other people’s leadership around math. I offer leadership around healing, which comes more naturally to me. That give and take creates room for macro-initiatives in a collaborative environment.

One of my favorite questions today is: how do we turn our collective full-bodied intelligence towards collaboration, if that is the way we will survive?

My favorite life forms right now are dandelions and mushrooms—the resilience in these organisms, which we think of as weeds and fungi, the incomprehensible scale, the clarity of identity, excites me. I love to see the way mushrooms can take substances we think of as toxic, and process them as food, or the dandelions spread not only themselves but their community structure, manifesting their essential qualities (which include healing and detoxifying the human body) to proliferate and thrive in a new environment. The resilience of these life forms is that they evolve while maintaining core practices that ensure their survival.

A mushroom is a cost-transformer, a dandelion is a community of healers waiting to spread... What are we as humans, what is our function in the universe?
One thing I have observed: When we are engaged in acts of love, we humans are at our best and most resilient. The love in romance that makes us want to be better people, the love of children that makes us change our whole lives to meet their needs, the love of beauty that makes us drop everything to take care of them, the love of community that makes us work tirelessly with broken hearts.

Perhaps humans' core function is love. Love leads us to observe the most beautiful way than any other emotion. I think of how delightful it is to see something new in my lover's face, something they may only know from inside as a feeling.

If love were the central practice of a new generation of organizations and spiritual leaders, it would have a massive impact on what was considered organizing. If the goal was to increase the love, rather than winning or dominating a constant opponent, I think we could actually imagine liberation from constant opposition. We would suddenly be seeing everything we do, everyone we meet, not through the cold eyes of war, but through eyes of love. We would see that there's no such thing as a blank canvas, an empty land or new idea—but everywhere there is complex, ancient, fertile ground full of potential.

We would organize with the perspective that there is wisdom and experience and amazing story in the communities we love, instead of starting up new idea organizations all the time, we would want to listen, support, collaborate, merge, and grow through fusion, not competition.

I think that the strength of our movement is in the strength of our relationships, which could only be measured by their depth. Scaling up would mean going deeper, being more vulnerable and more empathetic.

What does depth require from us, from me? In my longing for depth I have been re-rooting in the earth, in myself and my creativity, in my community, in my spiritual practice, honing in on work that is not only meaningful but feels joyful, listening with less but better judgment to the ideas and efforts of others, having stories that are long term.

Another path of walking this path has been the practice of humility—enough humility to learn, to be taught, to have teachers. As a military brat, I've always rebelled against anyone I perceived as an authority. It's been hard and rewarding work to relinquish some of that resistance in order to let wisdom in.

The Sufi poet Hafiz said, "How do I listen to others? As if everyone were my Teacher, speaking to me. [His cherished last words,]"

I am listening now with all of my senses, as if the whole universe might exist just to teach me more about love. I listen to strangers, I listen to random invitations, I listen to criticisms, I listen to my body, I listen to my creativity and to the artists who inspire me, I listen to elders, I listen to my dreams and the books I am reading. I notice that the more I pay attention, the more I see order, clear messages, patterns, and innovations in the small or seemingly random things that happen in my life.

In all these ways, I meditate on love.

This practice lets me connect to the part of myself that is divine, aligned with the universe, and the place within myself where I can be a conduit for spiritual truth—I don't know what else to call it. What comes forth as lessons and realizations and beliefs—doesn't feel political, or even about organizing. It feels like spirit leading me to the truth.

Things like:

- The less I engage in gossip, the less I harbor suspicions, the more space I find within myself for miraculous experiences.
- When I fear the universe, I fear myself. When I love and am in awe of the universe, I love and am in awe of myself. I imagine them, the power when I align with the universe.
- Nothing is required of me more than being, and creating. Simultaneously being present with who I am, who we are as a species... and creating who we must become, and within that who I must become.

When these truths come to me, it reminds me of how so many past leaders have humbled themselves, or been forced—through prison sentences, exile, or other punitive measures—to live simple lives, spending time in prayer and meditation and reflection. It reminds me that they all seem to have found core truth within themselves that cannot be shaken by external pressures. Those truths resonate with me when I read or hear about them, even without the context of their whole spiritual journey. But I know that to truly understand, to truly be able to transform myself, I must develop that own unshakable core. I cannot vicariously live their spiritual lessons; I must walk my own path.

Our generation must walk the spiritual path that is available to us only in this time, with its own unique combination of wisdom and creation.

I think there are many ways to find that simple path within ourselves, and I think that those of us who wish to see a truly, radically different world must demand of ourselves the possibility that we are called to lead not from right to left, or from minority to majority, but from spirit towards liberation.
So I suppose it is time to come out as a spiritual leader, in my own way. Which means—everyone is my teacher.

“You weren’t staving before you got here. You were born full.” —Chari Nicholson

To write this book, I have had to get intimate with what I don’t know, with my fears and doubts, with my restlessness. I was very young the first time I felt this restlessness; this sense that how things are isn’t right, isn’t enough, is empty even. Even as a child this sense made me restless, like flailing around a black hole, praying it is a portal and not a nothingness. As I get older, I understand that it is the unknown, and it is where the most exciting parts of life happen.

This is my leap into the unknown.

What is Emergent Strategy?

“Emergence is the way complex systems and patterns arise out of a multiplicity of relatively simple interactions”—I will repeat these words from Nick Obornley throughout this book because they are the clearest articulation of emergence that I have come across. In the framework of emergence, the whole is a property of the parts. Emergence is local—the health of the cell is the health of the species and the planet.

There are examples of emergence everywhere.

Birds don’t make a plan to migrate, raising resources to fund their way, packing for scarce times, mapping out their pit stops. They feel a call in their bodies that they must go and they follow it, responding to each other, each bringing their adaptations.

There is an ant to flocking, staying separate enough not to crowd each other, aligned enough to maintain a shared direction, and cohesive enough to always move towards each other. (Responding to destiny together.) Destiny is a calling that creates a beautiful emergency. Emergence is beyond what the sum of its parts could even imagine.

A group of capillaries or myocytes might not see flight in their future, but it’s inevitable. It’s destiny.

Our trees don’t set an intention to listen to each other better, or agree to hold tight to each other when the next storm comes. Under the earth, always, they reach for each other, they grow such that their roots are intertwined and create a system of strength that is as resilient on a sunny day as it is in a hurricane.

field of dandelions. We are invited to be that prolific. And to return fertility to the soil around us.

Cells may not know civilization is possible. They don’t assess as many units as they can sign up to be the same. No—they grow until they split, complexify. Then they interact and intersect and discover their purpose—I am a lung cell! I am a tongue cell!—and they serve it. And they die. And what emerges from these cycles are complex systems, movements, societies.

Nothing is wasted, or a failure. Emergence is a system that makes use of everything in the iterative process. It’s all data.

Octavia Butler (umb)

All successful life is (fractal)
Adaptable (Adaptive)
Opportunistic (Soulmate/Iterative)
Prioritized (Resilient, Transformative Justice)
Intervention and (Interdependent, Decentralized)
Focused (Creates More Possibilities)
Understood (Scholarship, Reflection)
Useful (Practice, Experiment)
Shape (God, Intention)

Octavia Butler said, “civilization is to groups what intelligence is to individuals. It is a means of combining the intelligence of many to achieve ongoing group adaptations.”

She also said “all that you touch you change; all that you change, changes you.”

We are constantly impacting and changing our civilization—each other, ourselves, innumerable strangers. And we are working to transform a world that is, by its very nature, in a constant state of change.

Janine Benyus, a student of biomimicry, says “Nature/Life would always create conditions conducive to life.”

The cells of a radical fringe of scientists who are realizing that natural selection isn’t individual, but mutual—that species only survive if they learn to be in community.

How can we, future ancestors, align ourselves with the most resilient practices of emergence as a species?
and critical mass are the ways to create change. But emergence shows us that adaptation and evolution depend more upon critical, deep, and authentic connections, a thread that can be nodded for support and resilience. The quality of connection between the nodes in the patterns.

Dare I say love.

And we know how to connect—we long for it.

Together we must move like waves. Have you observed the ocean? The waves are not the same over and over—each one is unique and responsive. The goal is not to repeat each other’s motion, but to respond in whatever way feels right in your body. The waves we create are both continuous and a new-time occurrence. We must notice what it takes to respond well. How it feels to be a body, in a whole—separate, aligned, cohesive. Critically connected.

I would call our work to change the world “science fictional behavior”—being concerned with the way our actions and beliefs now will shape the future, tomorrow, the next generations.

We are excited by what we can create, we believe it is possible to create the world we believe.

We believe.

For me this might be because I was born to a trekkie—meaning one who watches Star Trek. Obsessively.

My dad watched Star Trek in a way that seems logical to me now. He watched this “post-racin” narrative as a Black man from the deep south bringing multicultural children into a racist world—eyes wide, both bubbling up.

We all watched it together, as his military career took our family from place to place. My parents intentionally took us away from the United States for our early years and I think they believed that by the time we came back here things would have changed on the race front.

That didn’t happen, and the time came to return to the U.S—my father was stationed in Georgia. I think what I experienced there, the casual and constant presence of white supremacy, the knee jerk assessment of my intelligence and humanity, is one of the foundational causes for my study of sci-fi, apocalypse and post-apocalypse, emergence and complexity.

I thought then, and I think now: This can’t be all. No one survives this way, not long term. This can’t be the purpose of our species, to constantly identify each other as “other,” build walls between us, and engage in both formal and informal wars against each other’s bodies.

I feel, and felt, miraculous. It’s confusing to feel so miraculous when so many people hate my skin and my history.

I see the miraculous in others—even those who hate me have heartbeats, and I generally assume, have people they love. Why can’t they love me? Should I love them anyway? How can I hold these massive contradictions?

I started reading sci-fi obsessively. Looking for options, for other worlds where I wasn’t dismissed as an idealist or an inferior.

On that path I discovered Octavia Butler. Decades before my birth, she was working these same edges in her heart—pendulums swinging between curiosity, possibility, and hopelessness.

Because if we can’t imagine more viable futures, and adapt, our human future is pretty hopeless.

Octavia wrote novels with young Black women protagonists meeting aliens, surviving apocalyptic, evolving into vampires, becoming telepathic networks, thus traveling to reboot with slave-owning ancestors. Women throughout her work are two things: 1) a coherent visionary exploration of humanity and 2) emergent strategies for being better humans.

A visionary exploration of humanity includes imagination. Octavia spent her life working through complex ideas of the future on behalf of humans.

As long as we operate in the way we currently do—remembering the past, observing and acting in the present, imagining the future—there will be divergent paths that are moving in and out of alignment, in and out of conflict. Imagination is shaped by our entire life experience, our socialization, the concepts we are exposed to, where we fall in the global hierarchies of society.

Our ideas of right and wrong shift with time—right now it’s clear to me that something is wrong if it hurts this planet. But if we don’t claim the future, that sense of loyalty to earth, of environmentalism, could become outdated. Kenny Bailey helped me understand this—that justice, rights, things we take for granted, are not permanent. Once there were kings and queens all over the earth. Someday we might speak of presidents and CEOs in past tense only.

It is so important that we fight for the future, get into the game, get dirty, get experimental. How do we create and proliferate a compelling vision of economics and ecologies that center humans and the natural world over the accumulation of material?

We embody. We learn. We release the idea of failure, because it’s all data.

But first we imagine.

We are in an imagination battle.53

Trayvon Martin and Mike Brown and Rachida McKiride and so many others are dead because, in some white imagination, they were dangerous. And that imagination is so
respected that those who kill, based on an imagined, racialized fear of Black people, are rarely held accountable.

Imagination has a long history of being used to make sense of our world. It enables us to think beyond the limits of our current understanding and imagine new possibilities. In the context of economic and political systems, imagination can be a powerful tool for envisioning alternative futures.

A new world is not something that can be created overnight. It requires collective effort and shared vision. The more people who are involved in the process of imagining and envisioning, the more powerful the result will be. The idea of creating a new world is not a utopian fantasy, but a practical way of thinking about the world we wish to create.

The process of imagining a new world is not just a matter of individual creativity. It is a collaborative effort, as revealed in Ursula Le Guin's book, which is a way to envision a new world by imagining the possibilities of what could be. The idea of a new world is not a static concept, but one that is constantly evolving and changing.

My mentor Grace Lee Boggs first raised the concept of emergence with us in Detroit after reading Margaret Wheatley's work about biomimicry and mycological magic. The concept of emergence asks us to imagine what our movements would look like if we focused on collaborative strategy instead of individual action.

We need each other. More than any other space I’ve ever been in, we need each other. We need the idea of shifting from “mule wide, inch deep” momentums to “mule wide, inch deep” momentums that shift the existing paradigm. Now, I’ve said what emergence is. Strategy is a military term simply meaning a plan of action towards a goal.

In our movements for social change, we can see how emergent strategies can be used to create change. For example, the Occupy Wall Street movement used emergent strategies to challenge the existing economic system and create a space for collective action.

Emergent strategies are ways for humans to practice collaboration and grow the future through relatively simple interactions. The juxtaposition of emergence and strategy was what made the most sense to me when I was trying to explain the kind of leadership I see in Otsoro's books.

It isn't just that her protagonists are Black, female, or young leaders... Or maybe it is because all of those things: who leads matters, but what I noticed is that her leaders are adaptive—acting, changing as delphinus do the ocean, changing, but also intentional, like moving birds who know how to get where they're going even when a storm pushes them a hundred miles off course.

Humans! Some of us are surviving, following, fleeing—but some of us are trying to imagine where we are going as we fly. That is radical imagination.

Otsoro's protagonist were also interdependent, often polynuclear. I suggest that Otsoro understood her own feelings of loneliness, desire, and pleasure that the personal is political, and that pleasure evokes change—perhaps more than shame. More precisely, where shame makes us freeze and try to get really small and invisible, pleasure invites us to grow, to open, to grow.

At this point, we have all of the information we need to create a change: it isn't a matter of facts. It's a matter of longing, having the will to imagine and implement something else. We are living in the ancestral imagination of others, with their longing for safety and abundance, a longing that didn't include us, or included us as enemy, fright, other.
Octavia played with what emerged from a Black woman or girl—what longing, what pleasure, what communities and connections, what philosophies and divinities. The strategies that played out in Octavia’s books included adaptability and interdependence—often through the practice of exposed vulnerability.

Right now there is an organization called Black Organizing for Leadership and Dignity (BOLD), which is cultivating a safe space for Black leaders to practice being vulnerable, being in mutual support, with a goal of countering the dual model of leader isolation. We all need a place where we can weep and be held and feel our feelings and figure out how those feelings can direct our next evolution.

I am now part of the training team for BOLD, and I can honestly say that after a period of movement heartbreak and disillusionment, the focus on love and relationship at BOLD is what brought me back to justifiable and tangible hope, opening up inside me the generativity of time and gift that is necessary for movements to grow. I wanted to be a part of movement again because it was a pleasure to be in the Black spaces that BOLD was creating.

What amazes me is that, in the space of such constant Black trauma, we get together and celebrate and love and support each other, we laugh, we find the pleasure of community, of interdependence. It feels good together.

Octavia’s leaders were also decentralized, and they were generative—resilience and solutions came from that decentralization; the collective response was possible because no one person held the power.

Ferguson, Baltimore, Minneapolis, Chicago show us the power of individuals willing to act without a single leader, and their lead is real examples of inspiring others to stand up in real time, online and offline, to change legislation and perception.

Octavia was concerned with scale—understanding that what happens at the interpersonal level is a way to understand the whole of society. In many of her books, she showed that vast radical ideas spread through conversations, questions, one to one interactions. Social movements right now are also fractal, practicing at a small scale what we must want to see at the universal level. No more growth or scaling up before actually learning through experience. Rather than moving into one path forward, Octavia’s leaders were creating more and more possibilities. Not one perfect path forward, but an abundance of futures, always to manage resources together, be brilliant together.

In trying to place Octavia into a context that many still could understand, I kept finding resonance in emergent and complex sciences, the ideas that Grace had brought onto my radar. I started to pay more attention to the magic of the world, the small collective creatures who were humble and abundant and resilient.

And now I have become obsessed with how we can be movements like flocks of birds, underground pathways like whispering mushrooms, the seedbed representation of a galactic vision for justice—small patterns that social systems predict, spread lessons, and proliferate change.

Emergent strategies let us practice, in every possible way, the world we want to see.

So, ok, but what EXACTLY is emergent strategy?

Emergent Strategy:

- was, initially, a way of describing the adaptive and relational leadership model found in the work of Black science fiction writer Octavia Butler (and others).
- then it grew into plans of action, personal practices and collective organizing tools that account for constant change and rely on the strength of relationship for adaptation. With a crush on biodynamics and permaculture.

Biodynamics or biomimicry is the imitation of the models, systems, and elements of nature for the purpose of solving complex human problems.

Permaculture is a system of agricultural and social design principles centered around simulating or directly utilizing the patterns and cycles observed in natural ecosystems.

- which evolved into strategies for organizations building movements for justice and liberation that leverage relatively simple interactions to create complex patterns, systems, and transformations—including adaptation, interdependence and decentralization, fractal awareness, resilience and transformative justice, nonlinear and iterative change, creating more possibilities.
- and now it’s like... ways for human to practice being in right relationship to their home and each other, to practice complexity, and grow a compelling future together through relatively simple interactions. Emergent strategy is how we intentionally change in ways that grow our capacity to embody the just and liberated worlds we long for.
- and maybe if I’m honest, it’s a philosophy for how to be in harmony and love, in
and with the world.

a complex movement

over and over again
it becomes known
the peace we seek
is seeking us
the joy a full bud
awaiting our attention
justice in our hands
longing to be practiced
the whole world
learning
from within
this shuffling more in the universe
laboratory
labyrinth
interwoven demands
you are the one
you are waiting for
externalize love
bind us together into
a greater self
a complex movement
a generative abundance
an embodied evolution
learn to be here

on thefed tree
for once it always open
so what if you get some
we are going further
past reform, to wonder
this require comprehension

that cannot fit in words
out beyond our children
beyond the end of time
there is a circular cycle
a fractal of sublime
and we come to create it
to soil our hands and faces
loving loving and loving
ourselves and all our places

Lineage of Emergent Strategy

Lineage is both important for me to name, and impossible to track. I’ve come across these concepts in so many ways and places, primarily in the natural world, in my own body, in the development of my rebellions—in movements (including the Movement for Black Lives and Occup) in stories of how my maternal grandmother survived and created life in Pendleton, South Carolina, in stories of how my ancestors survived slavery.

Every time I have worked with Indigenous communities that have been able to sustain their cultural practices through the onslaught of colonization and imperialism, I listen. I hear emergent strategy—being in tight relationship with the natural world, learning from the ways change and resilience happen throughout this entire interconnected system. Some Indigenous and First Nations friends and readers have patiently listened to my “discoveries” around being humble in the face of the unknown, listening closely to all that is within and beyond our human ways of knowing. Honoring the changes that come through longing, honoring the very small things that create the largest shifts in the world.

I am the first child of two people who created a large shift for themselves from small actions, actions of love, weighted with the context of their time—a Black man and white woman finding lifelong, life-changing commitment in the context of white supremacy and racism, external and internal. And it was quick—a noticing each other, a flourishing without words, talking, laughing, and, four months later, eloping. I showed up a year and a half later. Love overcame racism, isolation, creating more possibilities between two people who had been taught the other was dangerous.

After family, there is a certain convergence of thinkers and conversations that has sharpened this particular set of concepts into something I could name and share. Most of this particular
lineage happened on worn down couches and over kitchen tables in Detroit from 2008 to 2014.

In 1992, Margaret Wheatley published a book called *Leadership and the New Science*, based on her work with organizations and leaders on what is effective, through a lens of quantum physics, biology, and chaos theory. Her key learnings were that:

- everything is about relationships, critical connections;
- chaos is an essential process that we need to engage;
- the sharing of information is fundamental for organizational success; and
- vision is an invisible field that holds us together, emerging from relationships and chaos and information.

Wheatley has continued developing her thinking on how transformation happens, how communities learn and evolve. She has published a series of books, in which she explores and shares her learning—including how we listen to each other, and what communities around the world are doing to generate life, to generate cooperation and future together. When we met and worked together on a gathering of organizations in Detroit, I got the sense that she’s a little over *Leadership*, so I encourage you to read it for the references—it’s a foundational text—and then read everything else she is working on.

Grace Lee Boggs, Detroit-based American revolutionary, my late mentor and friend, read *Leadership* and began to incorporate some of the ideas into speeches and her own writing in the last decade of her one-hundred year, one-hundred day life. As a thinker, I would say Grace was a voracious, efficient brain, and philosophy was her hunting ground. She stayed curious and relevant until the end, asking metaphysical questions on her deathbed. And she was usually ahead of her time—she was creating visionary fiction with Byron Bryant in the 1970s.

During the years of our mentorship and friendship, Grace would sit in her armchair and encourage everyone who came through her doors to develop as an organic intellectual who could take these concepts into daily life and community work. Grace taught me dialectical humanism—the cycle of collective transformation of beliefs that occurs as we gather new information and experiences, meaning that, over time, we can understand and hold a position we previously believed to be wrong.

In Grace’s work that cycle of transformation was foundational, something to cultivate in young people, in communities. In addition, she resonated with Wheatley’s idea that critical connections are more important in a long-term transformation process than critical mass.

Relationships are everything.

Invisible Illl Weaver, a Detroit-based artist-organizer, heard about the book and concepts from Grace, and became a student of emergence, naming their music and media work after the concept and generating an award-winning multimedia interactive album/project called *Complex Movement* around these and other concepts at the intersection of complex science and social justice.

I was reading the Black science fiction writer Octavia Butler’s work over and over during that time. I was also visiting and eventually moving to Detroit, in large part due to my relationship with ill. As I’ve mentioned, I was looking for language and frameworks to use when exploring the kind of leadership Butler’s protagonists practiced, and found them in conversations with ill and Grace about emergence—interdependence, iteration, being in relationship with constantly changing conditions, fractals.

Emergence, particularly as it applies to change, was a thrilling match.

ill and I now have a word for leadership—they are family, a chosen sibling, an idea confidence. Detroit’s movement and arts scenes are actually complex networks of such familial relationships, cultivated through sharing resources, living the city, and converting as we learn together. I am a nomad who also feels rooted here because of this network.

Wheatley’s work speaks of relationships—the depth of relationship between the individuals in a system determines the strength of the system. Butler, Wheatley, ill, Grace, myself, and many others have been growing a strong system of relationships for considering emergence as a game-changing approach to movement work.

*Oh, But Who Are You?*

The right. I’m African American. I am an aunt, sister, daughter, and writer. I facilitate, teach, mentor, mediate, pleasure, activate, so I know scholar, doula, healer, task reader, and other, disordered, singer, philosopher, queer Black multiracial lover of life living in Detroit.

For this book, I am drawing most heavily on my facilitation, mediation, and coaching experiences—I have been facilitating social justice movement work formally since 2001, and before that, in high school and college. I did student organizing in which I often found myself in what I later came to understand as the facilitation role. Inside of that work, I have been asked to mediate everything from organizational deadlocks, and have coached people through personal and professional transformation along the way.
I have supported environmental, food, reproductive, gender, economic, and other justice work over the years. At times, I worked formally in organizations that do harm reduction work with active drug users and sex workers, and in organizing at the national level, food justice work in Detroit, and nonviolent direct-action training, primarily supporting indigenous peoples and other communities directly impacted by climate crisis. I also supported the second US Social Forum as a facilitator. I’ve held a variety of roles from assistant to coordinator to executive director.

In each movement location I felt inspired by how people can come together for something greater than themselves, and I felt a yearning for more.

Throughout this path of my job, I was always facilitating, within and beyond the organizations I served. At its most fundamental, facilitation is the art of making things easy, making it easier for humans to work together and get things done.

“There is a difference between ‘simple’ and ‘easy’. Simple as in the relatively simple interactions of emergence, easy as in facilitation, the art of making things easier. I don’t think they are the same, and I have a hunch the difference might be important and that maybe it should be explicit. Simple means that it boils down to relationships between individual people, objects, beings, truths. Easy has more to do with the amount of friction (of understanding) between the people/objects/being/truths. And part of what can clear a path to making things easier is to name the simple interactions at play in a complex system.”

—Rachel Plato

I think facilitation is rooted in a certain grand love for life. I’ve recently realized that I come from a family of facilitators, though everyone wouldn’t describe themselves that way.

As I mentioned, my parents are an intercultural couple who fell in love in the deep South in the mid-sixties. I am sure I will write their love story one day, but for the purpose of this book, it’s mostly important to know that both of them had to be able to see something impossible based on the families and society they’d been born into as not only possible but forward, but as the best way forward.

In their family, work, and community roles over the years, both my parents have shown a natural capacity for leading groups, organizing tasks, making things easier for those around them. They have navigated a wide range of political and economic differences in our extended family.

I have two sisters, both of whom I look to as teachers and exemplars. We are each very different, and yet we all seem to be oriented towards facilitation, connection, and mediation work.

In our lifetimes, being multiracial has become more common, but navigating other peoples’ resistive, fearful, or denigrating ideas about our identities is one of the ways each member of my immediate family grew this skill set of being able to see what’s between, what connects the things that seem separate in the present, the present whole.

I also have to speak here of my evangelical maternal grandfather, Fred Malms, who facilitated many conversations about Jesus, morality, spirit, faith, and love in his lifetime. Every single time I was in his presence, I was amazed at how quietly we were in a conversation of his choosing, where he was really listening to my child-like questions about God and love and duty, where I felt I could be honest, even with my doubts, even with my heart.

We often differed in opinion, which, with him, felt safe and even invited in a way that it wasn’t and hadn’t been with most other southern white people. We would talk, and then he would get me on a horse and take me to the woods, asking me insistently if I understood how powerful the horse was, how beautiful the land was. Though he was not a fan of my queer sexuality—the only letter I have from him includes scripture and sadness in response to my somewhat important (but inaccurate) assertion that “I like to sleep with everybody”—he let me come back to his table and before he left this plane we created room to recognize each other’s humanity and spirituality. I came to understand his heart was rooted in love for me and concern for my eternal soul. He came to understand I was going to find my own way, and that I loved him and was living a life he couldn’t imagine. I learned from him the art of conversation, faith, and silence.

My paternal grandmother, Ethel Brown, died when I was nine. One of my clearest memories is that she saw me, impossibly, on a playground, shortly before she learned of her death. As I get older, I think part of her came to me to be carried for a while. I have felt her with me so deeply. Most of her stories have been passed down to us through stories about her, patched together with sparse deep memories of her hands in my hair: her door was always open, there was something to eat, the neighborhood kids knew they could come over her deep freeze for a popsicle. She had seven children of her own. From her I learned that food is an important foundation for community, and that love isn’t always a doorway to forever... sometimes it is a door to another love. Always it is an emerging process.

Among other things, love is an energy of possibility; the possibility of wholeness, in a

Platonic understanding, I come from a lineage of brave and radical love, and I don’t think it is an accident that love has been such an active force in my life and that I have come to the conclusion that there is a science of love, a science of transformation and acceptance, and gratitude that can help us to be better humans. So I will search on that love experience as
data as much as any other data presented in this book.
Below are some of the other aspects of who I am in this lineage, and what shapes the content gathered here.

Pleasure Activist

I picked up this term from Shainad Bevis, who I met only briefly before he passed on April 8, 2004, after twenty years of living with HIV. Initially, pleasure activism was about claiming our right to experience pleasure, to be safe and respected in the pleasures we choose.

It has expanded for me over the years as I have come to believe that facts, guilt, and shame are limited motivations for creating change, even though those are the primary forces we use in our organizing work. I suspect that to really transform our society, we will need to make justice one of our most pleasurable experiences we can have.

We also have to stop demonizing pleasure. We try to leverage control over the natural world by making our emotions and sensations less reliable than our thoughts, and then burn at the stake anyone who stays attuned to the ways and power of pleasure in the natural world. It’s counterproductive.

André LeBoeuf’s essay *The Uses of the Erotic* is foundational writing on the radical act of turning into pleasure and not settling for less than the erotic sense of wholeness and rightness in one’s life. She is my ancestor in the lineage of this particular work and many others.

I will speak many times of BOLD, the leadership development for Black organizers that is one of my favorite political homes. What we do is turn up and face reality, engage in deep relationship, and love up on each other. It is an organizing space that is also a learning space, and it is always a pleasure to enter. Every member of BOLD is a teacher of mine.

What we pay attention to grows—this is a hard world, but it is also a world full of love and pleasure, and it is to that, to attending to and growing that. That, to me, is pleasure activism. I am pretty certain that the next book I write will be on pleasure activism.

Healer/Doula

We all have the capacity to heal each other—healing is a possibility in each of us.

In my experience, healing happens when a place of trauma or pain is given full attention, really listened to. Healing is the resilience instinct of our bodies, a skill we inherit as we are taught to pay for and rely on data and medicine outside of our own awareness to be well. I have been discovering, or surrendering, to my gifts as a healer. There is a way I can open up my presence, voice, and touch to an energy greater than what my body or life has given me. Then truth, comfort, care, release, and other healing experiences can flow through, wholeness and acceptance of what is can be felt. I have studied reiki, massage, somatic bodywork, voice healing, tarot, and witchcraft. I have felt my healer capacity grow.

I place doulas here because the work feels the same—a doula, or birth supporter, is specifically a person who supports a pregnant person before, during, and after childbirth. The role was traditionally held by women in the family or community, often working with a midwife or doctor in the process. Childbirth these days is one of the clearest examples of humans working against nature—hence the norms of sterile medicated hospital births with a drastic increase in scheduled inductions and unnecessary C-sections.

I learned of these trends away from natural birth when my sister Autumn started having her babies, and she taught me a lot with her choices. I had been asked several times to be a doula and kept saying no, because BLOOD! And the proximity of the words “vagina” and “blood” didn’t feel like it was going to work for me.

Then a woman was attacked with a hammer behind my apartment while I was living in Oakland and I was the first to find her and comfort her as she bled and struggled to stay conscious. I saw her strength and aliveness and held it with her until the ambulance came. When she came to thank me a week later we spoke of how we had created a future for her together.

After that experience, and inspired by Autumn, I said yes the next time I was asked to become a doula, learning in an apprenticeship with Cynthia Jackson in Darien. Eventually, I got to be present for the birth of Autumn’s third child, and part of her support during the miscarriage of her fourth child. Life and death are transitions that women hold gently.

I have been a doula and birth supporter for several births. The final read through of this book was actually delayed because a dear friend brought a perfect little one into the world and I was her doula and could not look away from the first weeks of that precious being’s life.

Beyond birth, I have found doulas to be a role that applies to many aspects of life. Birthwork teaches us to engage passion, but not to indulge drama. It is another form of facilitation, making the miraculous experience of birth as easy as possible, intervening with anysystems that make the process harder, helping the family attend to each other and listen to what the body is saying, staying focused on the possibility and wisdom of the body.

Standing or sitting with someone as they realize, remember their own wholeness—that is the work of the healer and the doula.

My healing work is just pushing back the external world, making more space for people to
feel themselves. Detroit musician/spiritual teacher/friend Stealing Tole told me he considers himself a “dreaming room where people can try on their most authentic selves,” and this has been a guiding vision for me when I am engaged in my healing work. As he said in the opening of the 2016 Allied Media Conference, “It’s ok to feel beautiful in the process of creating justice.”

Written/Artist

My mom says writing came first, and it certainly has been the most consistent kind of work I have done in my life, writing, creating, drawing, singing. I am better at some forms of creating than others, but I enjoy all of it. And I have to write, in some form, every day. It is how I understand the world.

Toni Cade Bambara, a Black feminist writer-organizer who left lots of wisdom for us, said two things that I turn to when I start to wonder if art is enough of a contribution. On one hand, as I mentioned earlier, she said “The role of the artist is to make the revolution unrecognizable.” On the other hand, she said that “Writing is one of the ways I participate in transformation.” From this wisdom combination, I see that I am charged to write about the revolutions I long for, and that any writing I do, even if it isn’t explicitly political, is still a transformative act. I apply this to my songs, my self-portraits, my poems—understanding that when a Black, queer, third artist woman intentionally takes up space, it creates a new world.

Independent Science/Visionary Fiction Scholar

I read sci fi and visionary fiction as political, sacred, and philosophical text, and I engage with others who read it this way. I spent the first part of my life learning what history’s writers wanted to tell me to believe about the past, including the simple assumption that it was the past. I see massive patterns of violence and inequality in history, which permeate in the daily news. Science fiction, particularly visionary fiction, is where I go when I need the medicine of possibility applied to the trauma of human behavior. While I have done deep dives in the work of Samuel Delany, Ursula Le Guin, and others, I started this scholarship to earn with Octavia. She presented perspectives on the future that were terrifying and compelling, and she took my breath away with her ideas for how to navigate change.

She said:

`all that you touch`

you change
all that you change
changes you
the only lasting truth
Is change
God is change

If we accept the scientific and science fiction premise that change is a constant condition of this universe, then it becomes important that we learn to be in right relationship with change.

After much deliberation I have opted not to include a bunch of Butler analysis and spoilers in this book—her work is incredibly strong and clear. If you haven’t read it, feel free to put this book down and go read everything she wrote and then pick this book up. Warning: I reference her constantly and casually in these pages, as if you have also read the work and know what I am talking about.

That’s true of almost everyone I reference—this book is not about analyzing other people’s books or work. If you want more, go read the people and books I reference, and then consume the works they reference. I want to move forward from where others ended, or at least from the point of impact between their work and my own.

SS Wesley, Boggs, Butler, my family, my passions—all of these are teachers of emergence for me.

I have also been impressed and developed by the speeches of biomimetic teacher LaToya Ferguson, the myresin/medium scholar Paul Stamets, the organizing model of Ella Baker, the Tobek worldview presented in The Four Agreements by Don Miguel Ruiz, and the Tao Te Ching by Lao Tzu (particularly the interpretations of Stephen Mitchell and Le Guin).

I have learned that feeling matters, that feeling is an important and legitimate way of knowing. This learning has come most formally through Stamets (particularly the social justice and somatics blend found in generative somatics, through the work of Stad Haas, Svetlana Kudinova, Lisa Heiman, Lisa Thomas, Aidenko, Chris Lynam, Vassilikos Johni, and Richard Strozzi-Heckler), and Robert Gans’s work on the art of transformation now developing and evolving into emergent strategies at the Social Transformation Project under the leadership of Judith Fortini, Eugene Kim, Helene Malo, and others.

And Star Wars (the force); William Gibson (Pattern); China Miéville (Dreamside); Nalo Hopkinson (general broadcasting magic); the Zapatistas (many worlds exist); the Blue
Panthers meet the biological needs of a community at a scale of organizing: Black feminist artists Audre Lorde, June Jordan, Lucille Clifton, and Toni Cade Bambara create as a form of revolution; and many more.

Early on in my exploration of this kind of work, Marianne Mantlo and Alissa Auer, network thinktanks, invited me to hold a year of community practice with the Engage Network. They and the participants in that year-long journey were also teachers—Anita Froman, Kenti Kelly, Jenny Lee, Jodi Fontana, Jane Huang, E. B. Max, Arnie Rivera, Nick Norman, Jihan Koon, and Navina Khanna. Thank you.

I also held a transformative phone-based community of practice for a year after a Creative Change gathering in Utah. It had some wonderful and valuable and emergent elements to it that taught me about emerging and that is fertile for relationship building.

And then there are all the other incredible people whose voices are woven throughout this book and online appendix. They each taught me something about emergent strategy. And there are many more teachers whose voices are not in this book. I think that in the best I can do on explicit lineages, I feel free to remind of anything I missed. Basically, I see emergent everywhere and I feel profoundly convicted with the possibilities of being awake to it.

"Without positive obsession, there is nothing at all."—Octavia Butler

---

1. I’ve developed the idea of “shaping change” in conversation with Octavia Butler’s concept of “shaping ground,” which is introduced in the foreword of her Parallel of the Senses (New York: Four Walls Eight Windows, 1993).
4. "Heather’s not the one that I’ve been screaming helper in the street for."—Octavia Butler, Parable of the Sower, (Chicago: Penguin Classics, 2002).
5. "The community, dreams,山谷, secrets, desires, and all things are related to our thoughts and actions. All things are in relationship with each other."—Octavia Butler, Parable of the Sower (Chicago: Penguin Classics, 2002).
6. "I can’t see myself in the mirror—my body is not my own."

Cynthia Jackson grew up in a home of natural birth and many siblings, and has been working as a doula as long as she can remember. She is now working as a home birth midwife and doula in Detroit. More information about her work can be found at http://www.sacredroser的一anings.com/.

30 Interview by Kay Bonetti, 1982.
31 Butler, *Parable of the Sower*.
32 Including *Survivor*, which was published by Doubleday in 1978 but never reprinted because Octavia didn’t like it, calling it her “Star Trek novel.” I think it is a useful read to see her growth and idea formation.
33 Butler, *Parable of the Sower*.
